	Urgent	Not Urgent
Important	**DO (MVP)** - Read trader's stats and account rules from CLI arguments - Simulate one trading path trade by trade - Apply account rules to show if it was passed or failed - Repeat simulation 10,000 times and count pass%, fail%, timeout%, and median days to pass	**Schedule (v2.0)** - Daily loss limit rule and intraday drawdown - Consistency rule (no single day can be more than x% of total profit) - Presets for common account types - Commissions and contract size per trade - Stats read from a CSV trade log - Results saved to a CSV
Not Important	**Delegate (libraries)** - java.util.Random for random win/loss outcomes - Arrays.sort to find median days to pass - Printf for formatted results	**Delete** - Graph UI / chart window - Live market data (broker connection) - ML to predict win rate
